

News of Mine, of Prospect, of Furnace and of Mill.

KIMBERLY AND BUHL ARRIVE IN TOWN

Inspection of Interests at Stockton
and Other Camps by Special
Train.

Aboard a special train, with Stockton as their destination, left a party of gentlemen at 4:30 yesterday afternoon, whose purpose and perseverance have made it possible to reclaim the long-submerged wealth of that camp and to place it among the foremost in a commonwealth of matchless mining camps. The personnel of the party, to whose energetic methods all Utah is glad to take off its hat, included Messrs. Peter L. Kimberly and Frank Buhl of Sharon, Pa., Messrs. Dreyfus of Chicago and their resident representatives, including Willard F. Snyder, Walter G. Flier and S. M. Levy, while Grant Snyder, their representative at the Balaklava mines in California, had arrived from the west just in time to flag the special. Today the party will be en route to the Buckhorn group of mines, over which, as the owner of a valuable interest, it is exercising a general supervision, and, having inquired into developments there, it will apply itself, until Saturday afternoon, to the great Honorable mines and mill, its long tunnel and other points of interest.

Messrs. Kimberly and Buhl, who have been inspecting the interests of the Twin Falls Land and Water company, whose enterprise in Shoshone county, Idaho, is to bring nearly 300,000 acres of land under cultivation, came down from the north yesterday morning, much pleased with the progress being made on that undertaking, and before quitting the State will probably go south to Kimberly, the home of the Annie Laurie mines and mill, from which they are each month deriving a handsome dividend. There is a warm spot in the heart of the State for them, and that their reimbursement has begun on to generous a scale all mining men will rejoice.

SEASON OPENING AT AMERICAN FORK

With the snowdrifts receding and the road through American Fork canyon gradually reopening, the return of the prospector to that ice-clad region will begin in few days. The winter there, said Manager Copeland of the Taylor & Brunton sampler yesterday, has been one of unusual severity, the snowfalls in March prolonging it to unusual extent. To date there have been no reports of ore from the region although not a little work was prosecuted during the winter and at some of the mines, with substantial results. J. W. Myers of Murray, who has been interested in prospects there for some time, will make an effort to get to them in a few days, and will make examination of others for local investors. Everything indicates increased activity in American Fork canyon the present season, a condition that is undoubtedly justified by its merits. The earlier smaller reports show that at one period the camp was as productive as any in the State, the grade of ore much better than the average.

ENORMOUS TONNAGES OVER COPPER BELT

Over the tracks of the Copper Belt railway by which the hills and gulches at Bingham are threaded there is now being moved daily with the mills and smelters as its destination no less than 1000 tons of ore and yet the patrons of the route which has done so much to simplify transportation in the camp of copper are calling for more rolling stock, said Superintendent Van Housen, who was at the local offices yesterday. The principal customers at this time are the Boston Con., the Commercial, the Utah Copper, the Yampa and Ohio, with miscellaneous others of smaller stature, while the up-freight to the United States company's properties and others on the route is of no mean proportions. Superintendent Van Housen has his systems under excellent control, and from this time it will be one of the busiest in the entire West.

THE HORN SILVER'S HIGH-GRADE COPPER

Down at the Horn Silver mines, Frisco, whose shareholders drew down the usual quarterly dividend of \$20,000, on July 1, the management is extending a number of the main levels into new ground with most satisfactory results, and in each direction in one of the usual varieties of shipments, all the while, continue quite active, the copper ore maintaining a steady average of 25 per cent in that metal, the argentiferous lead ore a good margin. Manager Farnsworth is very much pleased with conditions at the property, and expects to experience no difficulty in providing the means for regular dividends for many years.

U. S. BINS TO OPEN TO THE LEAD ORES

One more week and the bins at the United States smelter in Salt Lake valley will be ready for the reception of lead ores, its ore purchasing department prepared to enter the open market in competition for the product of that class. While the lead-blast furnaces will not be prepared to go into commission for some time the competition will be no less spirited, the vendors to draw down his moneys as deliveries are made, the ores to pile up in the bins that have been constructed with a 20,000-ton capacity and to await the completion of the furnaces.

BEAR GULCH HAS A RECEIVER

A message from Montana during the afternoon said that the big mines and mill in Bear gulch, that State, were yesterday thrown into the hands of a receiver, this on the order of the Federal court, none other than Miles Finlen of Butte having been designated to serve in that capacity. The properties in Bear gulch were acquired about two years ago by the Kimberly syndicate, with Henry M. Ryan, formerly of this city, the possessor of some of the principal interests. A few months ago discord began to invade the household, and recently Mr. Ryan took charge of the properties. The situation continued, according to advices from Montana, to grow hourly more acute, until it was finally decided to ask for a receiver, which has been granted. Mr. Finlen, as well as favorably known in Zion as he is in Butte, is a master miner, has been and is identified with some of the biggest achievements in Montana, and his appointment will no doubt be agreeable to all interests.

A LIFELESS DAY ON STOCK EXCHANGE

The day's trading on the mining exchange was confined to 7825 shares, for which \$1584.99 was paid. At the close animation was almost suspended, the market completely overcome. The only trader during the day to betray any activity whatever was Lower Mammoth, and a small war was fought between the demand for it at 17 cents. Con. Mercier recorded a sale of half a thousand at 23 cents, while Daly-Judge was shorted at 34.50, with Century coming out to a bid at 61 cents. Tetra, notwithstanding its presence in the dividend column, was permitted to go at 23 1/2 cents and Uncle Sam, whose surplus continues to crawl up, at 16 1/2; while Butler-Liberal flattened out to 10 1/2. The heavy weights all hung to their moorings, while the list from Tonopah was lifeless, the day closing on the following market:

THE BIG TUNNEL ON THE PAYETTE

A Salt Lake Engineer Tells of the
Most Fascinating Enterprise
in Idaho.

In all Idaho there is no project more fascinating nor one which holds out greater possibilities than that which has in view the diverting of the waters of the Payette river at Ox Bend, Boise county, that the bed of that stream for a stretch of three miles may be made to discharge its wealth of gold, said Capt. William M. Davidson, the veteran mining engineer, on his return from the north yesterday. The Payette river has long been recognized as one of the great gold-bearing troughs in the State, said the Captain, while samples taken by him from choice ledges have yielded a valuable \$430 per cubic yard. The waters have been very unruly, however, and the efforts to handle the sands have been very unsatisfactory. To overcome this it was decided by an Iowa company to drive a tunnel under the "bend" and diverting the waters and drain the intervening stretch. Of this tunnel 600 feet has been completed under the management of L. A. Coates, the total length to be 1200 feet, the avenue 10x20 feet in the clear. At the mouth of this tunnel, through which the waters will gush, a power plant will be installed and electrical energy created for the needs of the locality.

At Placerville, from which so much gold has been mined, four bars are now being washed, with a steam dredge and a steam shovel in operation. L. A. Davidson, who is now waiting here on further assignments from his wealthy Eastern principals.

PROSPECTOR EXHIBITS SAMPLES OF GOLD ORE

Special to The Tribune.
CALIENTE, Nev., July 7.—Con Riley, who has been prospecting down the line for the past five months, came through Caliente today with samples of gold ore which he says were taken from the Lost Cabin claim, one of the Desert group. He struck a ledge of \$25 free gold ore in which the vein was six inches wide, in a porphyry formation, and drifted for thirty feet, the vein widening to sixteen inches, but the values gradually getting lower. At the face of the drift at this point he encountered a horse in the ledge and decided to prospect on the surface in hopes of recovering the lost vein. About 20 feet from the mouth of the tunnel he found small croppings of high grade ore, and sank ten feet on three-foot ledge, which he found a four-inch vein on the surface, and at the bottom of the shaft it had widened to sixteen inches and showed considerable coarse gold in panning. Riley continued sinking until he had got down twenty-three feet, when, as the vein was widened to six inches, he decided to take a drift thirty feet on the ledge and took out about ten tons of ore, which assayed \$75 per ton. He then located a tunnel to the extension to the Lost Cabin, and sunk a prospect hole on the Arizona claim on a six-inch vein of the same character. He is now on his way to Colorado Springs, where he will report the result of his discoveries to Haney & Burnett, who have a lease option on the claims which runs for one year from May 2.

He expects Mr. Burnett to return with him during this month and make an examination of the properties located, which, if successful, will result in the further exploitation of all these claims.

Norman Burton, a member of the law firm of Burton, Cronin & Burton of Philadelphia, passed through camp today in company with Jim Forbes, a prospector who located the Georgia group of claims thirty-three miles from the mouth of the Colorado river. The firm took an option on the six claims comprising the group through Jim Forbes, who is now on his way to Colorado Springs, where he will report the result of his discoveries to Haney & Burnett, who have a lease option on the claims which runs for one year from May 2.

The samples which he has with him show the values in a decomposed white quartz, freely sprinkled with gold in the aconeycomb, very brittle and showing a little iron oxidized. He says the ledge has widened at a depth of twenty-five feet to sixteen inches on the foot wall side, and that a strip of clay on the hanging wall carries in it white quartz which is about \$25 to \$30 per ton. The ledge runs northwesterly by south-easterly, and lies between quartzite walls, dipping northeasterly. At an angle of about 20 degrees it seems to be a good well in place. Forbes says that nearly everything around him is taken up, and that locators are finding good values in most of their workings. There is a good wagon road from the mines to Moapa, Idaho, the water being about 10 miles for nearly five miles if it is decided to treat the ore at the mines.

THE DAY'S CROP OF ORE AND BULLION

In the ore and bullion market the day's settlements amounted to \$59,693, McCormick & Co. reporting them as follows: American bullion, \$23,800; gold, silver, lead and copper ore, \$35,893, the figures in each item once more identical.

RUSHING WORK ON ZINC PLANT

Upon the \$200,000 zinc plant with which the zinc-bearing ore of the great Horn Silver mines at Frisco are to be brought into commercial activity, work is progressing as rapidly as conditions will permit. The site for the plant which is to be reared at a point near the mammoth dump has been surveyed, while under the direction of W. A. Peck, who left for camp again yesterday, the survey for the pipe-line between Newhouse and Frisco, which water will be procured—and Frisco, is now being completed. Brought over the hill the distance will be three and a half miles, while if the pipe is swung around its base the distance will be doubled. The plant will be one of the most imposing in the country, according to the plans, and will have a capacity of 800 tons of ore daily, the Messrs. Peck expecting to have it in commission in October. O. J. Peck, who is now in New York, wires that he will leave for the West at once.

THIRST FOR UTAH'S IN EASTERN MARKETS

The buying of Utah Con. of Utah has been and still is a feature of the local market, says the Commercial Bulletin of Boston. New York is more bullish on this stock than is Boston; that is, they talk higher prices for it over there, and expect it to go to 50. Boston is more conservative and thinks if it pays \$2 next winter, or at the rate of \$4 a year, it should sell around 40, and at its present figures it is considered one of the best copper investments in the list. The Utah Con. began its dividend-paying career in 1901, when two distributions of \$1.22 per share each were made. Then a recess was taken until January, 1903, when a dividend of \$1.70 per share was paid. Since then, the regular semi-annual distributions of \$1.50 per share have been made. Next year it need surprise no one to see the company paying at the rate of \$5 per share per annum, according to Salt Lake advices, although it is interesting to note that Salt Lake agrees with Boston that \$40 a share is about the proper price for Utah at present.

The United States Mining company did the expected thing when the directors met and posted the first dividend of 50 cents a share, says the same publication. The company was brought out in Boston in 1899 and reorganized the next year. The fact that the dividend has been declared by the directors, among whom are some of the best and most conservative business men of the city, is assurance that the property is worth the price which has been paid by its original promoters, have been made good.

Last year its copper product was fully 10,000,000 pounds, and its ores carry such values in gold, silver and lead that the cost of the copper is very low. At present it is understood to be earning over \$100,000 net per month.

HIGH-GRADE ORES IN THE HANNAHAP

Reporting to Manager Fred Bettles in this city, Frank B. Work, superintendent of the Hannahap Mining company's properties, eighteen miles east of Tonopah, says:
"During June we have extended our east drift fifty-two feet. The porphyry is about the same in hardness, but for the last four feet we have had ten inches of good-looking ore showing quite a sprinkling of ruby silver stains. I consider it the most encouraging find of which I have struck the mine. It looks like a permanent ore body, with a chance to be lots larger and richer when we reach the dyke."

Assay returns on samples of the ore that were taken to Tonopah, but delayed, writes the superintendent, but these are expected hourly at the local offices, where there was not a little cheer over the outlook during the day.

Boston Coppers Quiet.

Special to The Tribune.
BOSTON, July 7.—Copper shares have not shown quite so much activity today. Commission houses have plenty of orders, but not at the present prices. Traders are waiting for the time being and the market left itself become almost inactive. The lead of the New York market and sell these stocks on the appearance of weakness there. The market looked irregular. However, the lead of the New York market, Boston, and 10 Wall Street, New York, furnish the following quotations:

Mining Notes.

It is understood that the management of the Yankee Con. of Tintic is to substitute the electric hoist now in operation with one that will be operated by air.
A letter from W. C. Humphreys of Crow Springs, Nev., to W. M. Wantland of this city, says much free gold is occurring in the Owens group, where turquoise nodules as big as tin cups are occurring in the Humphreys group, on which Mr. Wantland has an option.
Manager Louisa of the Grand Central was in from the south again during the day. The second unit in the big compressor is now on the ground and will be in position in a few days.
George A. Hancock leaves for his old home at Park City this morning to participate with the relatives in the anniversary of Col. William M. Ferry's sixtieth birthday with a legion of friends present in spirit. Mrs. Hancock will accompany him.

The management of the Mammoth of Tintic yesterday marketed ninety-seven tons of ore on contract showing as much as \$28.50 gold, with some silver, per ton. Its transfer books on the July dividend will close today.

Roy Hunter, representing the Sullivan group of which he is in use in the camp of Utah, is among his customers again.
The newly-elected directors of the Black Diamond group of mines, one of the new ones with Daniel Storms of Indiana as president, Joseph Derichs, vice-president, and William C. Alexander, secretary and treasurer.
Carl Teller, a prominent Michigan shareholder in the Camp Creek Co. of Alta, has returned from camp most enthusiastic.
